

Zorff Blockchain

One Pager

The Solution

With over a thousand cryptocurrencies in the market and with improvements constantly being added, including on payment systems and trading platforms, with the hopes of improving their functionality. The crypto space is a rapidly expanding industry and it is expected to do so continuously in the future. However, many existing systems and solutions are flawed and based on unbalanced principles which make them prone to manipulation, exploitation and fiasco.

Why Zorff?

Zorff, unlike traditional ICO tokens with lots of vague promises of possible future returns or idealistic visions which may never result into product, entitle their holders to guaranteed rights to 100% of the total profits from the payment system and trading platform through cryptocurrency dividends.

The Solution: Zorff Market Revolution

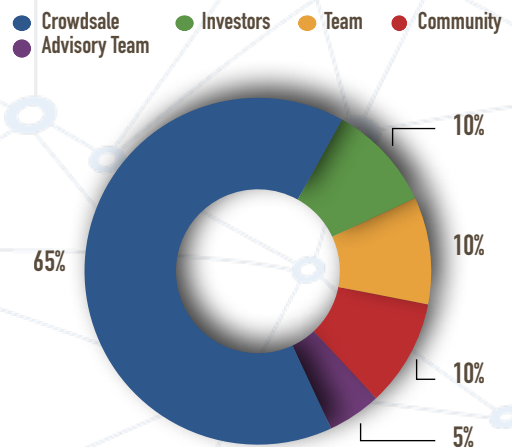

Zorff aims to provide a first-hand cryptocurrency with its own customised blockchain protocol. It is a decentralised intermediary which allows buyers and sellers to trade directly in any crypto and fiat currency using any method of payment. It features an integrated payment solution and exchange platform which makes it complete and sustainable as it is interconnected with the fiat currency world. This bionetwork offers an upgrade in terms of advantages over existing payment solutions such as speed, 24/7 performance, security, scalability and user familiarity.
